The worldwide update of reported civilian deaths in the Iraq war and occupation.

## The IRAQ BODY COUNT Database

This is an ongoing human security project which maintains and updates the world's only independent and comprehensive public database of media-reported civilian deaths in Iraq that have resulted from the 2003 military intervention by the USA and its allies. The count includes civilian deaths caused by coalition military action and by military or paramilitary responses to the coalition presence (e.g. insurgent and terrorist attacks). It also includes excess civilian deaths caused by criminal action resulting from the breakdown in law and order which followed the coalition invasion.

Results and totals are continually updated and made immediately available here and on various **IBC web counters** which may be freely displayed on any website or homepage, where they are automatically updated without further intervention. Casualty figures are derived from a comprehensive survey of online media reports from recognized sources. Where these sources report differing figures, the range (a minimum and a maximum) are given. This method is also used to deal with any residual uncertainty about the civilian or non-combatant status of the dead. All results are independently reviewed and error-checked by at least three members of the Iraq Body Count project team before publication.

**Column Key:** Please use **Incident Code** in correspondence about specific incidents - "Details..." immediately below the incident code links to personal information about those killed (when available). **Date** and **Time** refers to the incident, not the date it was reported, and may not always be exact. Spelling of **Location** can vary between media reports and will be corrected where possible - we suggest [Encarta Online](#) for reference. **Targets** are primarily as stated by military sources; **Weapons** refers to munitions and/or delivery vehicles. \*NOTE: Some numbers have been lowered from those given in the original reports to adjust for potential double-counting by IBC. This means that occasionally the entry in the Max column (if more has been subtracted from it) may be lower than in the Min, as in x096. Refer to incident x073 for an example of our procedures for such entries. [Full Discussion of Methodology and scope...](#)
